### CTE Partner Database Application

Welcome judges! This application was created to allow our school's Career and Technical Education (CTE) department to better manage information on industry partners.

### **Getting Started**

To run the application:

1. Ensure Python 3 is installed on your machine
2. Download the zipped file from GitHub repository
3. Extract all from the zipped file
4. Navigate to the file FBLA coding and programming
5. Navigate to the file Main
6. Open the program CodingAndProgramming\_SivamoorthyNithinNemaliNiravJogaManasa.py
7. Run the program

This will open the partner database GUI.

### **Key Features**

The application allows users to:

- Securely access the schools CTE-Partners database
- View a table listing all community partners with key details like contact info and offered resources
- filter partners by organization type
- Search for keywords In the database
- Contact an admin if help is needed

### **Usage Instructions**

To filter:

1. Users must select the "Filter by type of organization" dropdown and select the organization that they want to allow.
2. Once an organization is selected, users must click the search icon to display results.

To Search:

1. Users must type the search terms into the search box, making sure to avoid spelling errors. Search terms can be part of the organization name, type of organization, resources available, or phone number.
2. Once done typing, users must click the search icon to display results.

To Get Help:

1. Users must Navigate to the Main database access page
2. Click on the ? Icon in the top right corner of the page
3. Navigate through the interactive Q and A
4. If help is still needed, obtain admin contact information from the bottom of the help page
